Rock wool and Slag wool insulation products play a significant energy-saving role by reducing energy use in homes, office buildings, businesses and manufacturing plants. Insulating to proper economically efficient levels helps our homes and businesses use substantially less energy. The physical and chemical properties of Mineral Wool, also known as rock and slag wool, are major factors in their utility. Because the fibers are non-combustible and have melting temperatures in excess of 1,000°C ~ 1,100°C, they are used to prevent the spread of fire. As a primary constituent of ceiling tile and sprayed fire proofing, rock and slag wool products supply fire protection, as well as sound control and attenuation. In addition, the use of rock and slag wool as a horticultural growing medium has increased in recent years.

CE Certificate
